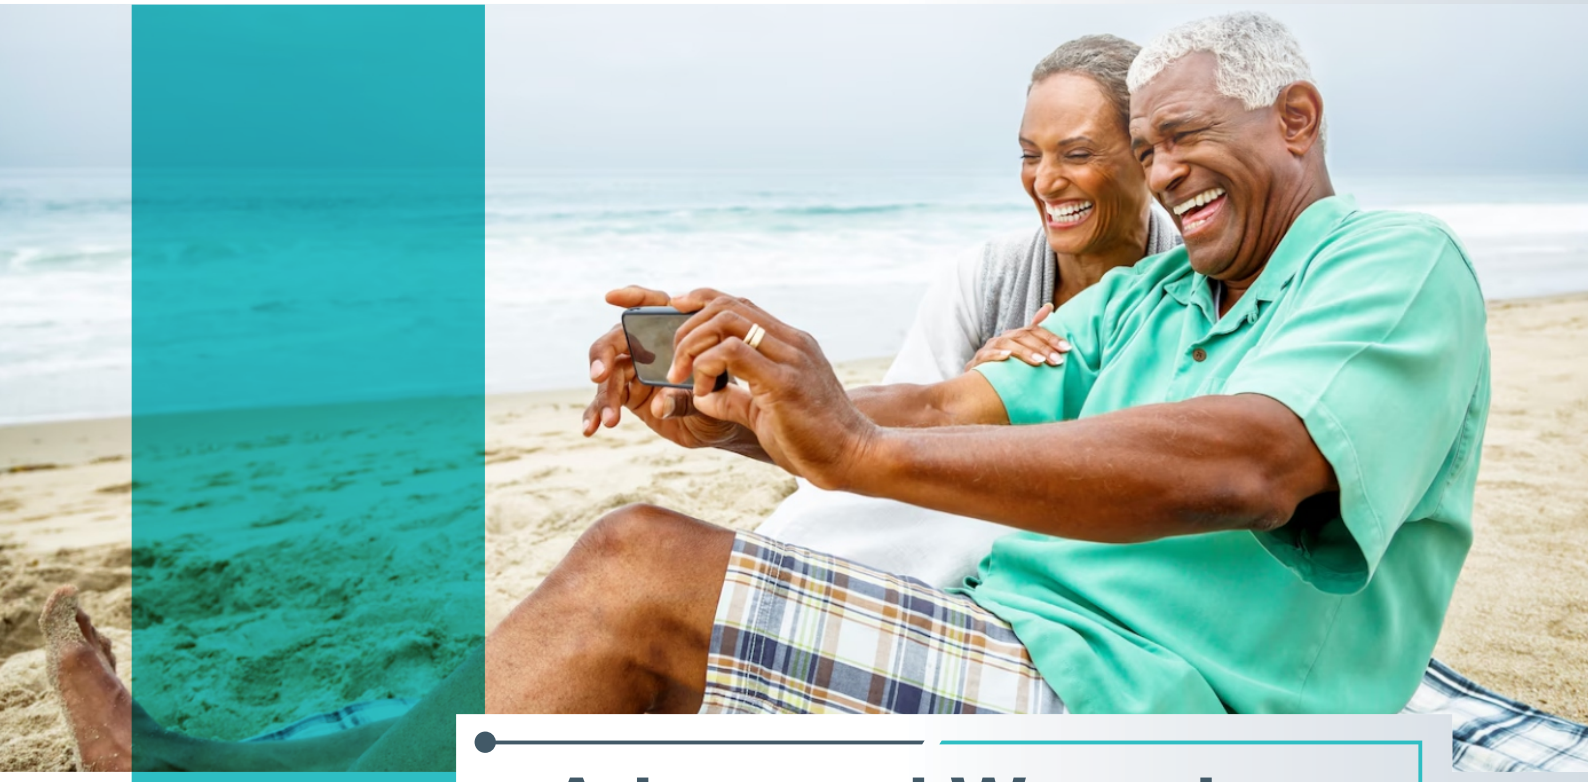
AltiPly® | Lyophilized Placental Membrane

AltiPly® Lite | Lyophilized Amniotic Membrane



Advanced Woundcare Made Simple

YOU'LL SEE THE DIFFERENCE

One look and it is obvious that AltiPly is different. AltiPly is opaque and thicker than other grafts. The dry graft is flexible and easy to handle. What you can't see is the benefit of our proprietary processing focused on preserving the quality of the matrix. The growth factor-rich matrix, with an outer basement membrane and epithelial layer, immediately serves as a natural barrier and supports re-epithelialization.

Ideal wound covering options for your challenging cases.

- Natural barrier protects from the environment
- Simple to apply-flexible graft with no rehydration needed
- Physiologic reservoir of growth factors and cytokines

Better Preserved Matrix Features

Optimal Growth Factor Preservation

Convenient Room Temperature Storage

880 Harbour Way South, Suite 100, Richmond, CA 94804 | Ph: (510) 685-3939

BERKELEY BIOLOGICS

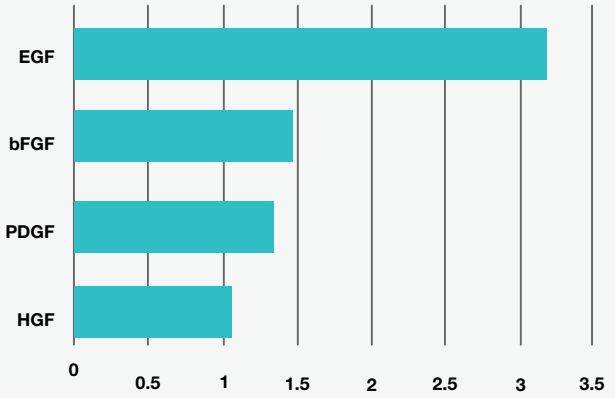
AltiPly®

Lyophilized Placental Membrane

AltiPly® Lite

Lyophilized Amniotic Membrane

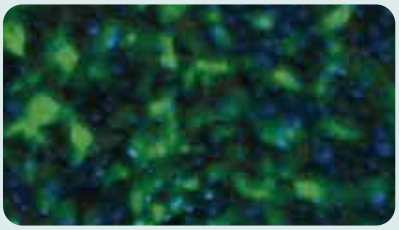
Proprietary processing improves levels of growth factors over dehydration methods'.



Growth Factor Index

- Three times higher EGF than dehydrated processing
- High quality matrix supports cell attachment and migration for re-epithelialization.

In vitro modeling of fibroblasts (green) migration on AltiPly. Epithelial layer in AltiPly is visible as blue punctate staining'.



Next generation allograft that offers easy-to-use wound care solutions

- Natural physiological barrier for various applications
- Optimal preservation of endogenous growth factors

Chronic non-healing

Supports wound closure of chronic diabetic foot ulcers, venous leg ulcers and pressure wounds

Surgical

Enables rapid, non-pathologic healing and remodeling of surgical and reconstructive wounds
